

# Whole House Fluoride Removal Water Filter Package

by PROMOLife

**Our Whole House Fluoride Removal System will help eliminate up to 95% + of Fluoride from your drinking, bathing and shower water.**

People are becoming more aware of the dangers of added Fluoride (Hydrofluosilicic Acid) and high concentrations of natural fluoride in drinking water. It is known that the type of Fluoride that is added to public water (Hydrofluosilicic Acid) is a raw untreated hazardous waste from the phosphate fertilizer mining industry. The waste is straight from the pollution scrubber systems of the phosphate mines and is highly contaminated with arsenic, lead and a potpourri of other heavy metals.

We offer you a solution to remove up to 95%+ Fluoride from your drinking water. This system will also remove **aluminum**, manganese, arsenic, lead and most heavy metals.

## How does the whole house Fluoride removal system work?

We use Bone Char (charred animal bones) as a fluoride removal media. Bone Char has been proven effective to remove fluoride from water. Widely use in Europe, Africa and India, bone char is the only media that works without being affected by water temperature swings and pH. One reason bone char is effective is because Fluoride has an affinity to attract to the bone. Africa and India have very high concentrations of naturally occurring fluoride. But bone char is effective in removing any type of Fluoride.

## Removal Specifications for Bone Char:

Bone char is designed to remove fluoride levels as high as 10 ppm to below 0.2 ppm as long as they are sized according to these standards. We highly recommend a minimum of four 20" filters if your system has a maximum flow of six gallons per minute. If you have more than a 6gpm flow then call us for assistance or use the guide below.

Wrench and brackets included

**Finding Flow Rate:** Time how long it takes to fill up a one-gallon container from an outside faucet. If it takes 15 seconds you have 4 gpm. You may need to use a five-gallon bucket to get a more accurate flow rate calculation. This will be your gallons per minute (gpm).

**How to determine how many filters you will need:** For every 1.5 gpm flow you will need one 20" Big Blue filter (filter and cartridge combo).

## What you get with this package

The price reflects four 20" Big Blue Housings, four 20" Bone Char Filters, mounting brackets and a housing wrench, **with shipping already included**. Each 20" filter cartridge contains approx. 6 lbs of bone char. Size of each Big Blue housing: 22"L x 7.5" diameter.

**Note: Bone Char is not approved by the National Sanitation Foundation. This is because the NSF has no protocol to remove fluoride from our drinking water.**

**Price:**  
**\$975.00 FREE SHIPPING!**  
**Code: WHOF215**

## Extra Filters & Housings

It is recommended that you replace the filters annually for a family of four, a little longer if there are less people. It is also recommended (but not necessary) that you install a pre-filter. This filter can be purchased at your local home improvement store for a nominal amount. Please allow a two-week lead-time before shipping. Bone Char Filters are a *Special Order* and are non-returnable. Orders cannot be canceled after 24 hours of order placement.

**Replacement Filter Price:**  
**Set of 4: \$499.80. + \$60.00 Shipping**  
**Code: FXBC20BC**

**Filter Housings Price:**  
**\$109.95 ea. + \$25.00 Shipping**  
**Code: FH2BBL201PR**

### Special Note:

This system is not recommended for condominiums or apartments. It should also be noted that a professional plumber or advanced DIY install this unit due to the hazards of leaks and the cutting of main water pipes. Installation requires a firm knowledge of water supply and plumbing.

**We only accept VISA, Mastercard or Money Orders as payment for this item.**

To order this system please call 1-800-544-8927 or fax us at 1-831-464-8427.

Find us on the web at radioliberty.com or mail to: PO Box 969 Soquel, CA 95073

**Orders in California must add 9% sales tax.**
